Hannah Ricks – Reflection – HTML – Project #1

Instructions: The goal of your reflection document is to 1) explain your design choices, and 2) explain the techniques you used in the program. Be sure to use proper terminology (for example elements, opening tag, closing tag, etc.) in your reflection. Demonstrate you understand the design concepts and the software you used to create your site. Make sure you proofread your reflection, so it is free of errors.

Provide a table that includes the required html elements and explain briefly where you did so in your site. Be sure to include any ways you went above the minimum as well.

HTML	Where it is	Explanation
Contain a header and footer tag with applicable content	**index.html** **header: line 34-48** **footer: 65-69**	**header contains nav element** **footer contains copyright information**
Contain a navigation bar (on each page - navigation should be consistent across the site)	**index.html** **nav: line 35-42**	**Navigation to other pages on site**
Two different levels of headings	**menu.html** **H1: 65** **H3: 106**	**Different side subheadings for menu**
One list or table	**menu.html** **table: line 80-102**	**Table: menu item**
Three different inline elements in your text on the site (p. 89 has a table)	**about.html** **Em: line 55** **Small: line 77-78** **A: 38-41**	**Em to italicize "loves"** **Small for copyright info** **A to link a page**
Contact info (it can be fake - for example 555-555-5555) with a phone number	**contact.html** **Line 55**	**Fake phone number**
A link to at least one external page	**about.html** **line 60**	**about.html** **Link to Lakeland website**
Images (keep in mind websites do tend to be very visual so you will likely use more than one image throughout the site).	**index.html** **line 44, 51, 59** **menu.html** **line 59, 67, 110, 111**	**Photos of menu items and cover photos**

Include any items above the minimum	menu.html list: 70-76 list: 117-125 external link: 115 <style> element on each page	menu.html menu pasta items list of beverages link to Coca-Cola css

If you went beyond the minimum requirements for this assignment, please explain here how you did so. I added multiple lists and external links. I also added multiple directories for picture links.

Show a screenshot(s) of your site validation for EACH html page.

Explain your revised submission:

Explain the feedback you received in class. I needed to add more content so I added more to the about page and menu page. I also was told to make the socials on the contact page more visual so I added icons for that. I was also told to emphasize "LOVES" on my page so I added the <em> element. For more content on my home page I added a monthly special with a direct link to my menu and a call to action click to order link. I also italicized the *all meals come with…." To make is more subtle which I was told to do. I was also reminded during feedback day to mark up my telephone number on my contact page. I also added more pictures to the menu and updated my nav bar because it was originally just a list so I made it look nicer.

I organized my site to have separate pages for each section. So I have a separate page for "about my restaurant" another for my menu, as well as a landing page and a contact page. I tried to make the photos the right size to flow through the site so the user isn't bombarded with huge or unnecessary photos.

I chose a light tan as the background so it is not a boring white but still adds some style that's easy on the eyes. I used multiple tags to really separate my information to where it made sense.

Nu Html Checker

This tool is an ongoing experiment in better HTML checking, and its behavior remains subject to change

Showing results for uploaded file menu.html

Checker Input

Show ☐ source ☐ outline ☐ image report   Options...

Check by file upload ⬍   Choose File no file selected

Uploaded files with .xhtml or .xht extensions are parsed using the XML parser.

Check

Use the Message Filtering button below to hide/show particular messages, and to see total counts of errors and warnings.

Message Filtering

1. **Error** **Attribute** `alt` **not allowed on element** `a` **at this point.**

    From line 54, column 10; to line 54, column 83

    ↵   `<li><a href="../images/green_pasta.jpg" target=blank alt="green bowtie pasta">`Green

    Attributes for element `a`:

    Global attributes

    `href` — Address of the hyperlink
